

# ArchiMetal

9 May 2023 18:28:31

## Purpose

This Case Study demonstrates the value of the ArchiMate 2.1 modeling language for planning and expressing complex business transformation.

The Case Study is about a fictitious manufacturer named ArchiMetal. Through high-level architecture modeling, the ArchiMate language illuminates the coherence between an organization, and its processes, applications, and infrastructure. This Case Study presents examples of ArchiMate models that can be elaborated as necessary for analysis, communication, decision support, and implementation.

# 01. Stakeholder

No viewpoint

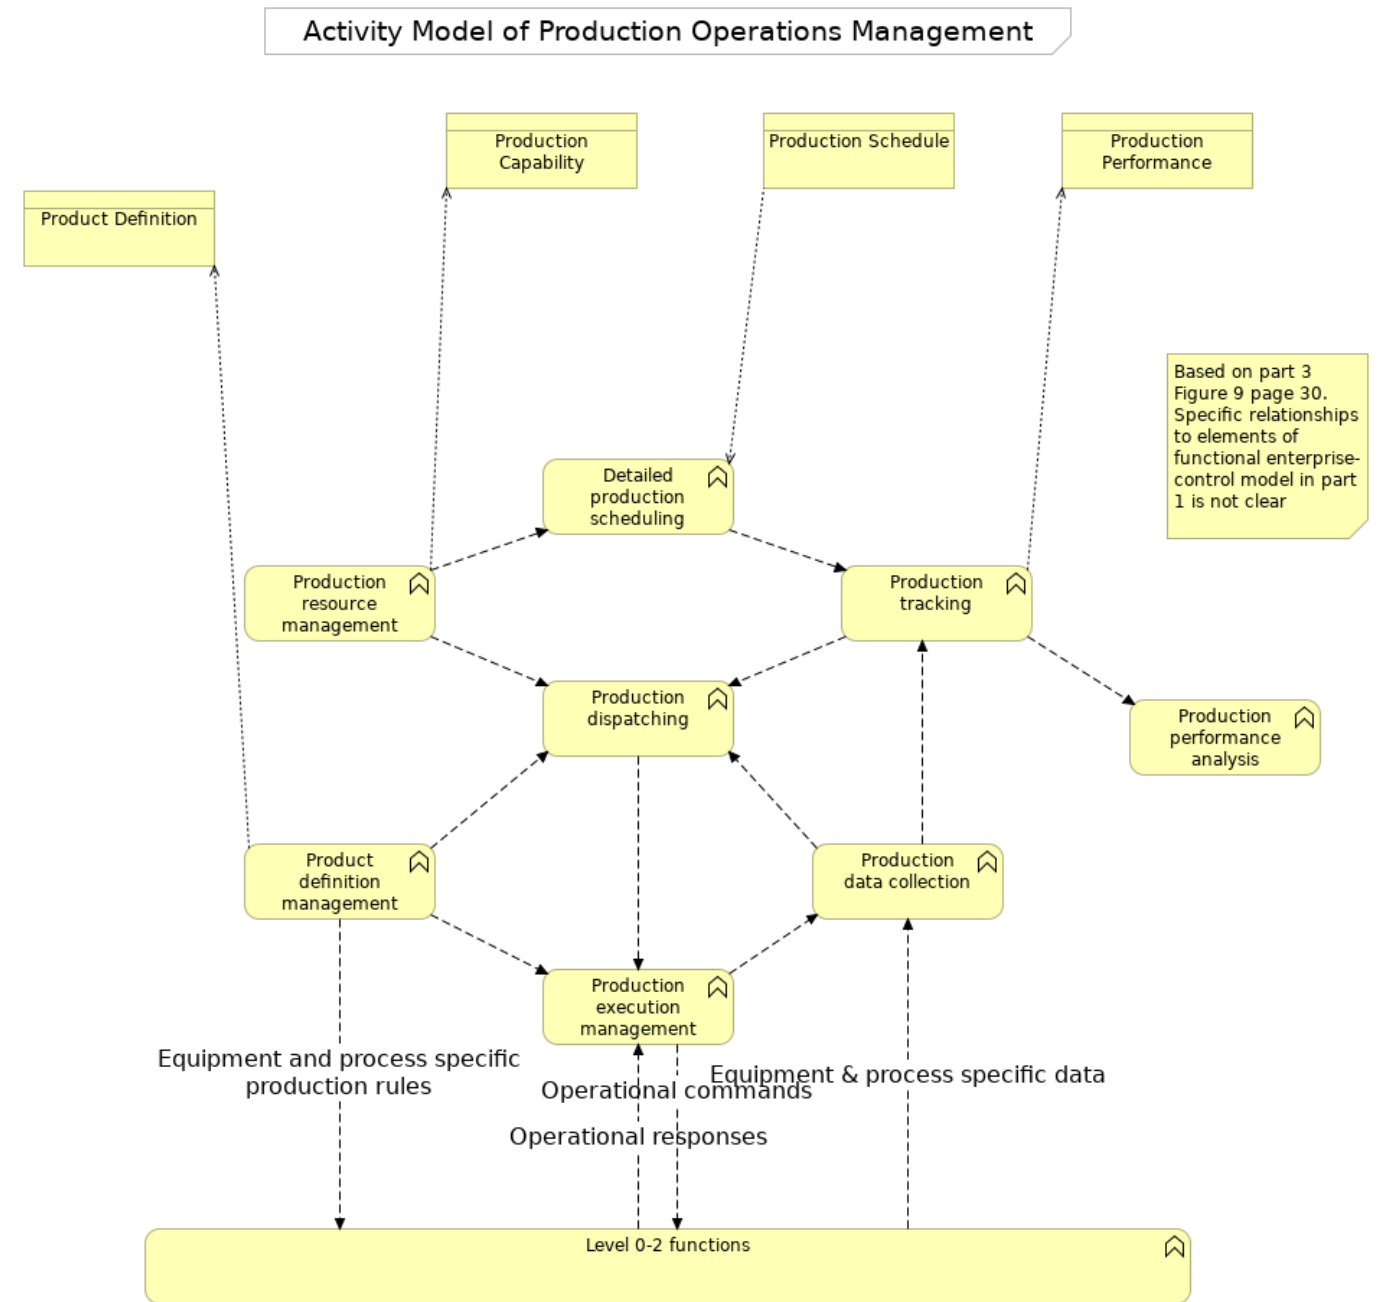

## Elements

Element	Type
Builder	Stakeholder
Building products manufacturer	Stakeholder
Complete building	Goal
Design still valid	Assessment
Manufacture beams	Goal
Obtain beams	Goal
On-time delivery	Driver
Order already designed and priced	Assessment
Price out-of-date	Assessment

## 02. Activity model of production operations management

No viewpoint

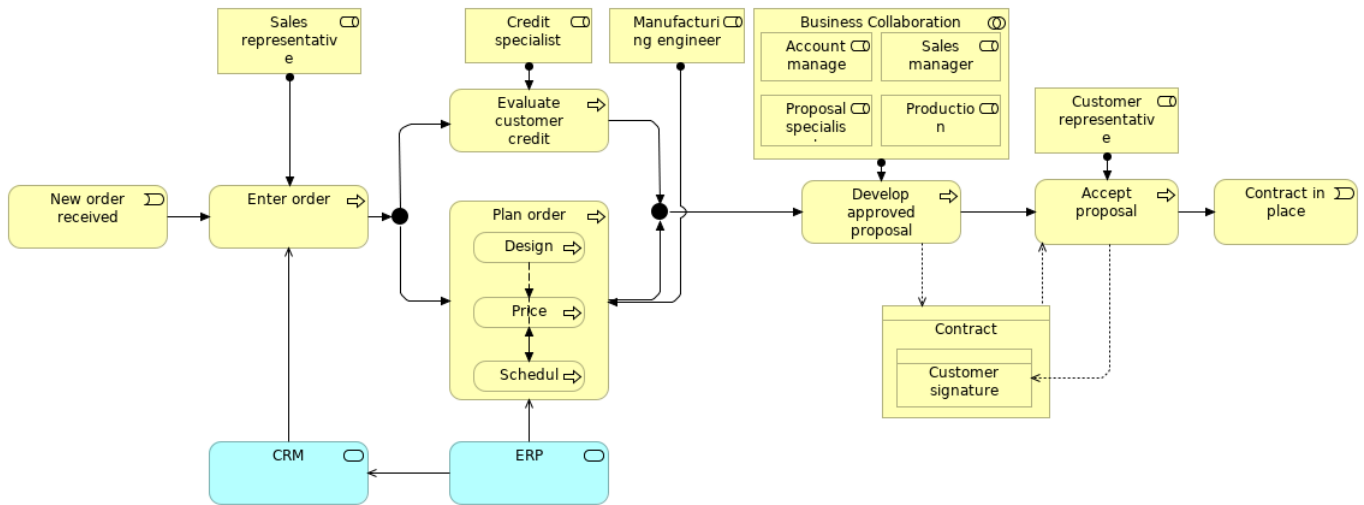

### Elements

Element	Type
Detailed production scheduling	Business Function
Level 0-2 functions	Business Function
Product Definition	Business Object
Product definition management	Business Function
Production Capability	Business Object
Production data collection	Business Function
Production dispatching	Business Function
Production execution management	Business Function

<b>Element</b>	<b>Type</b>
Production Performance	Business Object
Production performance analysis	Business Function
Production resource management	Business Function
Production Schedule	Business Object
Production tracking	Business Function

## 02. Order-to-contract

No viewpoint

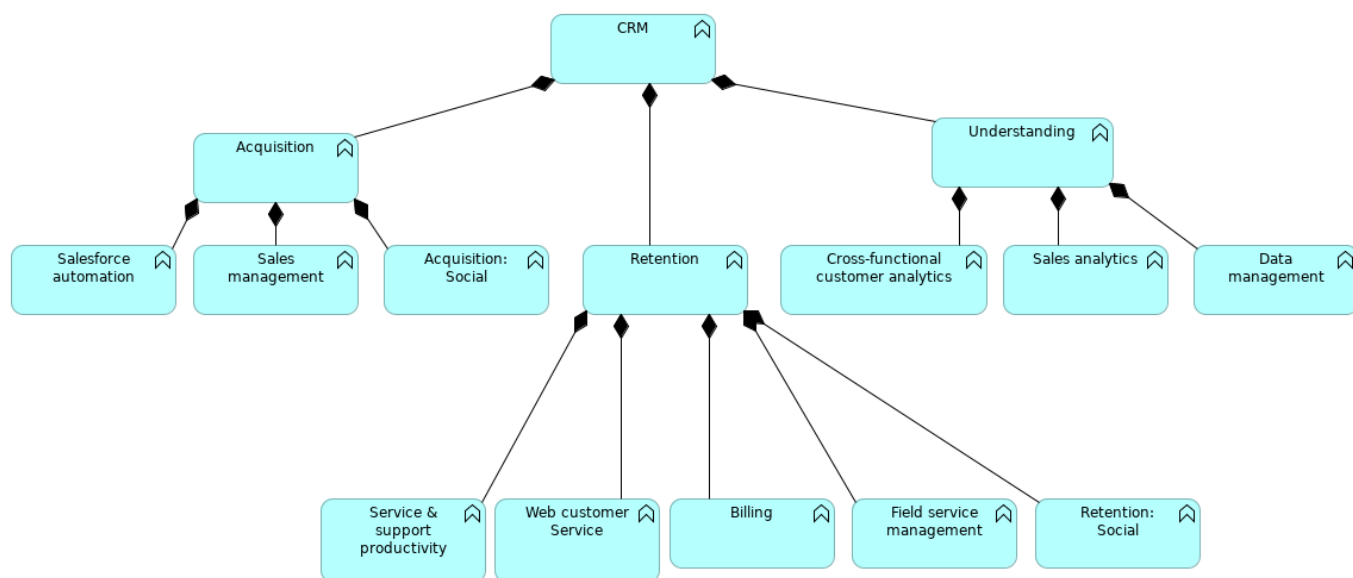

### Elements

Element	Type
Accept proposal	Business Process
Account manager	Business Role
Business Collaboration	Business Collaboration
Contract	Business Object
Contract in place	Business Event
Credit specialist	Business Role
CRM	Application Service
Customer representative	Business Role
Customer signature	Business Object
Design	Business Process
Develop approved proposal	Business Process
Enter order	Business Process
ERP	Application Service
Evaluate customer credit	Business Process
Manufacturing engineer	Business Role
New order received	Business Event
Plan order	Business Process
Price	Business Process
Production manager	Business Role
Proposal specialist	Business Role
Sales manager	Business Role
Sales representative	Business Role
Schedule	Business Process

## 03. CRM functional model

No viewpoint

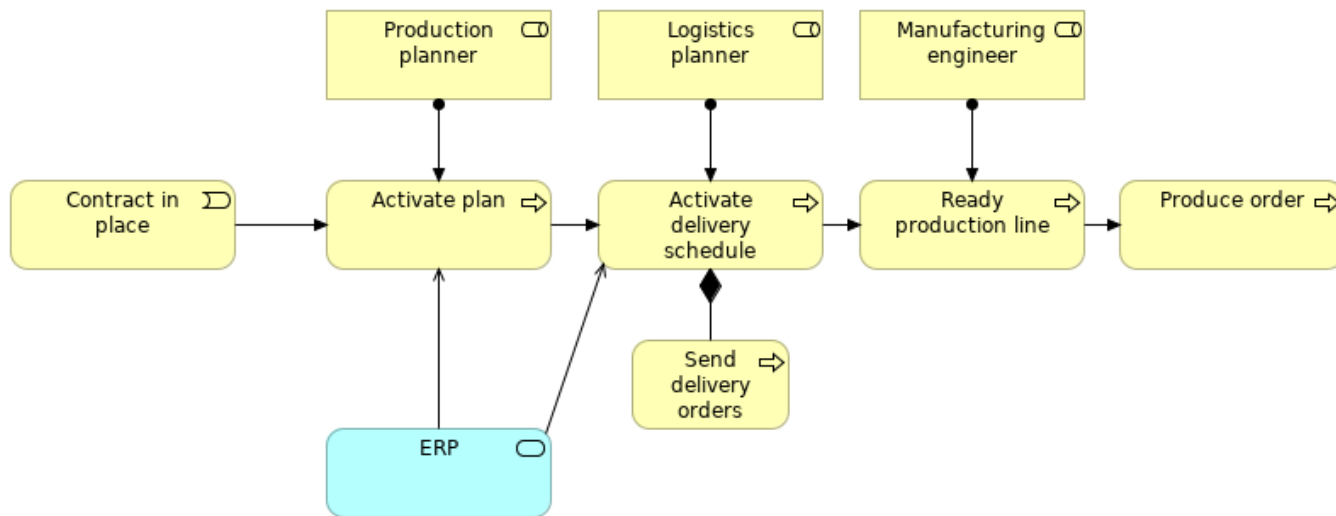

This model is based on a model used internally by The Standard for CRM platform selection several years ago. Some attribution may be necessary; this needs to be further researched. Enterprise elements of the ISA functional model have been added

### Elements

Element	Type
Acquisition	Application Function
Acquisition: Social	Application Function
Billing	Application Function
CRM	Application Function
Cross-functional customer analytics	Application Function
Data management	Application Function
Field service management	Application Function
Retention	Application Function
Retention: Social	Application Function
Sales analytics	Application Function
Sales management	Application Function
Salesforce automation	Application Function
Service & support productivity	Application Function
Understanding	Application Function
Web customer Service	Application Function

### 03. Order fulfillment

No viewpoint

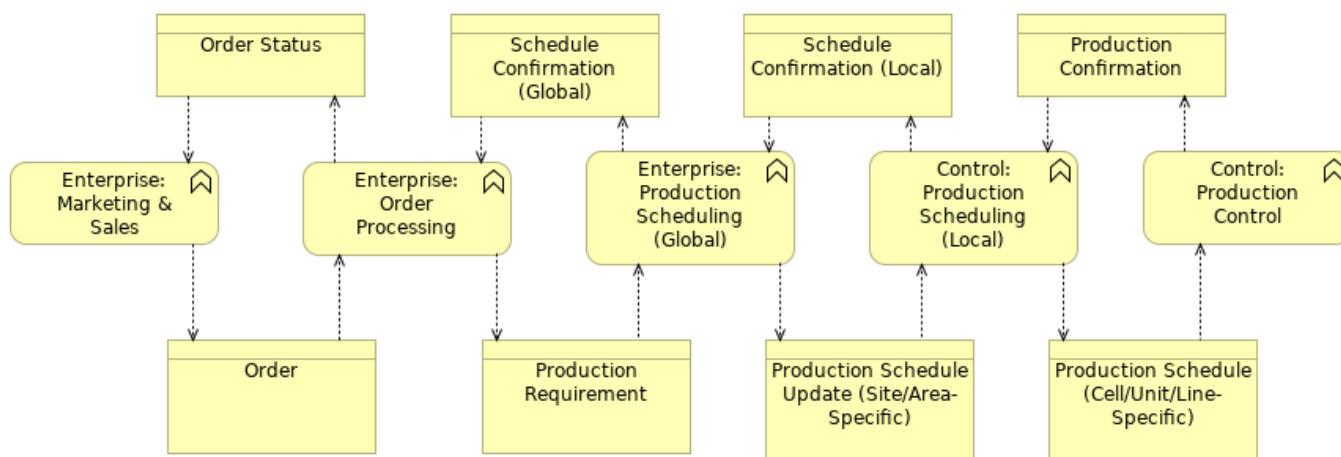

#### Elements

Element	Type
Activate delivery schedule	Business Process
Activate plan	Business Process
Contract in place	Business Event
ERP	Application Service
Logistics planner	Business Role
Manufacturing engineer	Business Role
Produce order	Business Process
Production planner	Business Role
Ready production line	Business Process
Send delivery orders	Business Process

## 04. Change in production schedule

No viewpoint

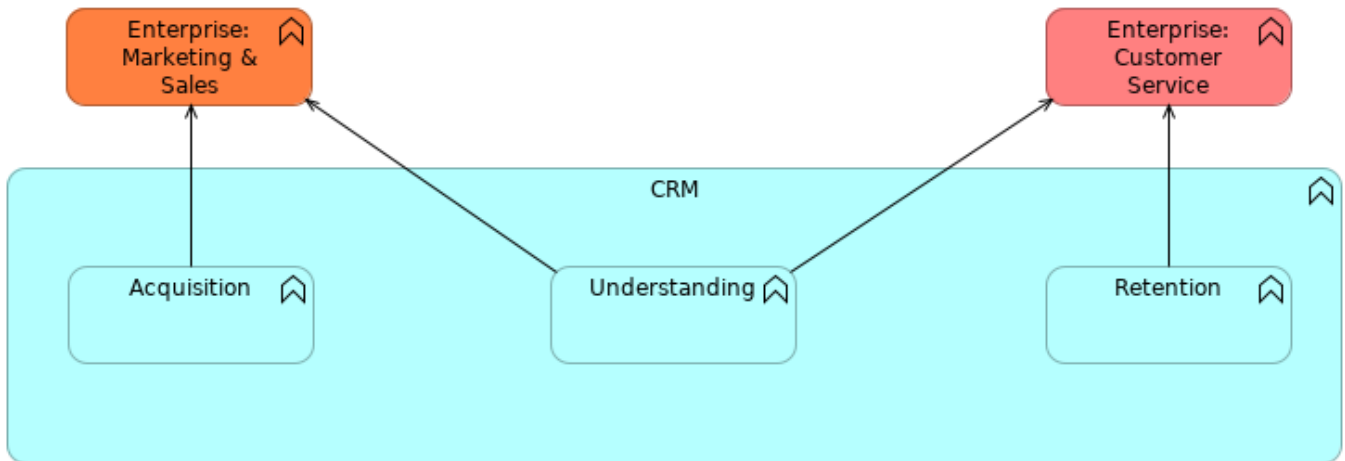

### Elements

Element	Type
Control: Production Control	Business Function
Control: Production Scheduling (Local)	Business Function
Enterprise: Marketing & Sales	Business Function
Enterprise: Order Processing	Business Function
Enterprise: Production Scheduling (Global)	Business Function
Order	Business Object
Order Status	Business Object
Production Confirmation	Business Object
Production Requirement	Business Object
Production Schedule (Cell/Unit/Line-Specific)	Business Object
Production Schedule Update (Site/Area-Specific)	Business Object
Schedule Confirmation (Global)	Business Object
Schedule Confirmation (Local)	Business Object

## 04. Enterprise business function usage of CRM application functions

No viewpoint

### Enterprise Business Function Usage of CRM Application Functions

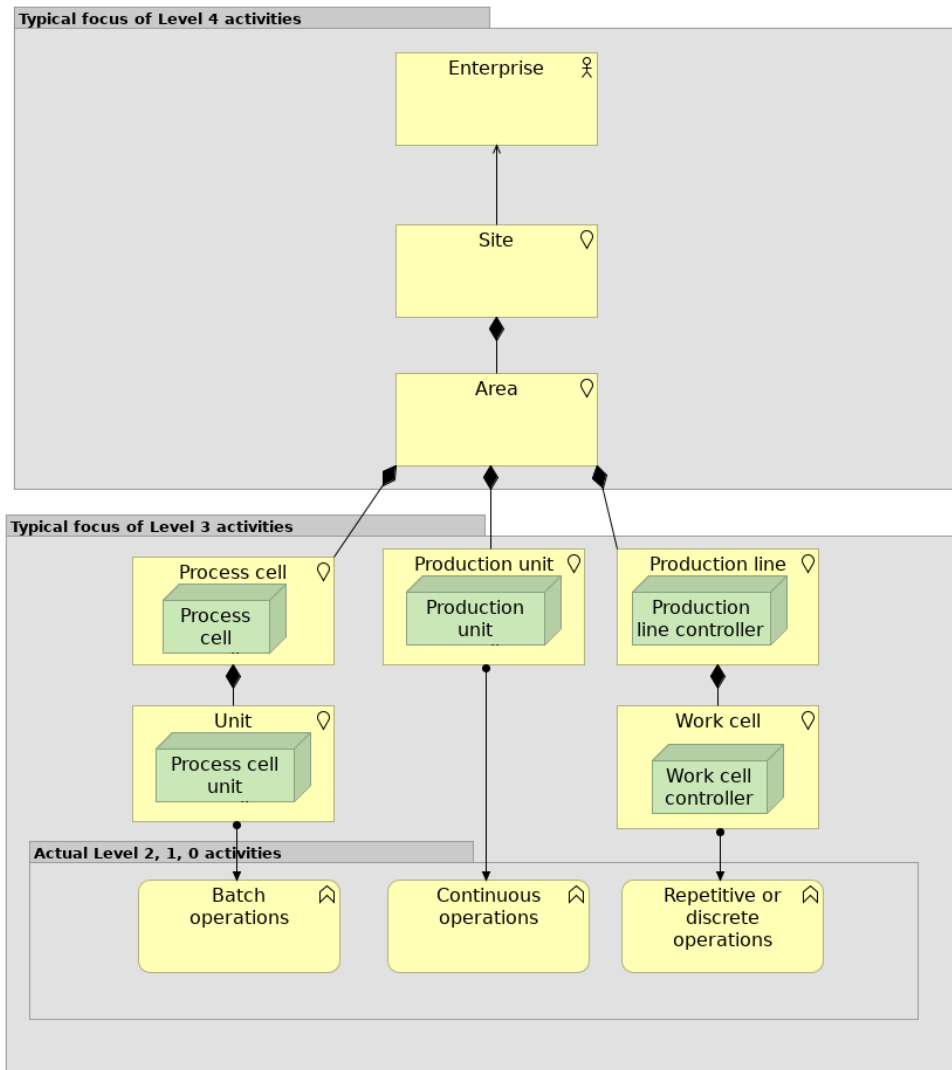

#### Elements

Element	Type
Acquisition	Application Function
CRM	Application Function
Enterprise: Customer Service	Business Function
Enterprise: Marketing & Sales	Business Function
Retention	Application Function
Understanding	Application Function

# 05. Equipment hierarchy

No viewpoint

## Equipment Hierarchy

Based on ISA-95 Part 1 Figure 3, Page 19, Figure 4, page 23. This view applies the ArchiMate definition of location "A location is defined as a conceptual point or extent in space," to machinery as well, since machinery occupies space. All machinery is assumed also to have a processing capacity, i.e. a node that can run control applications, including ones that are embedded.

## Elements

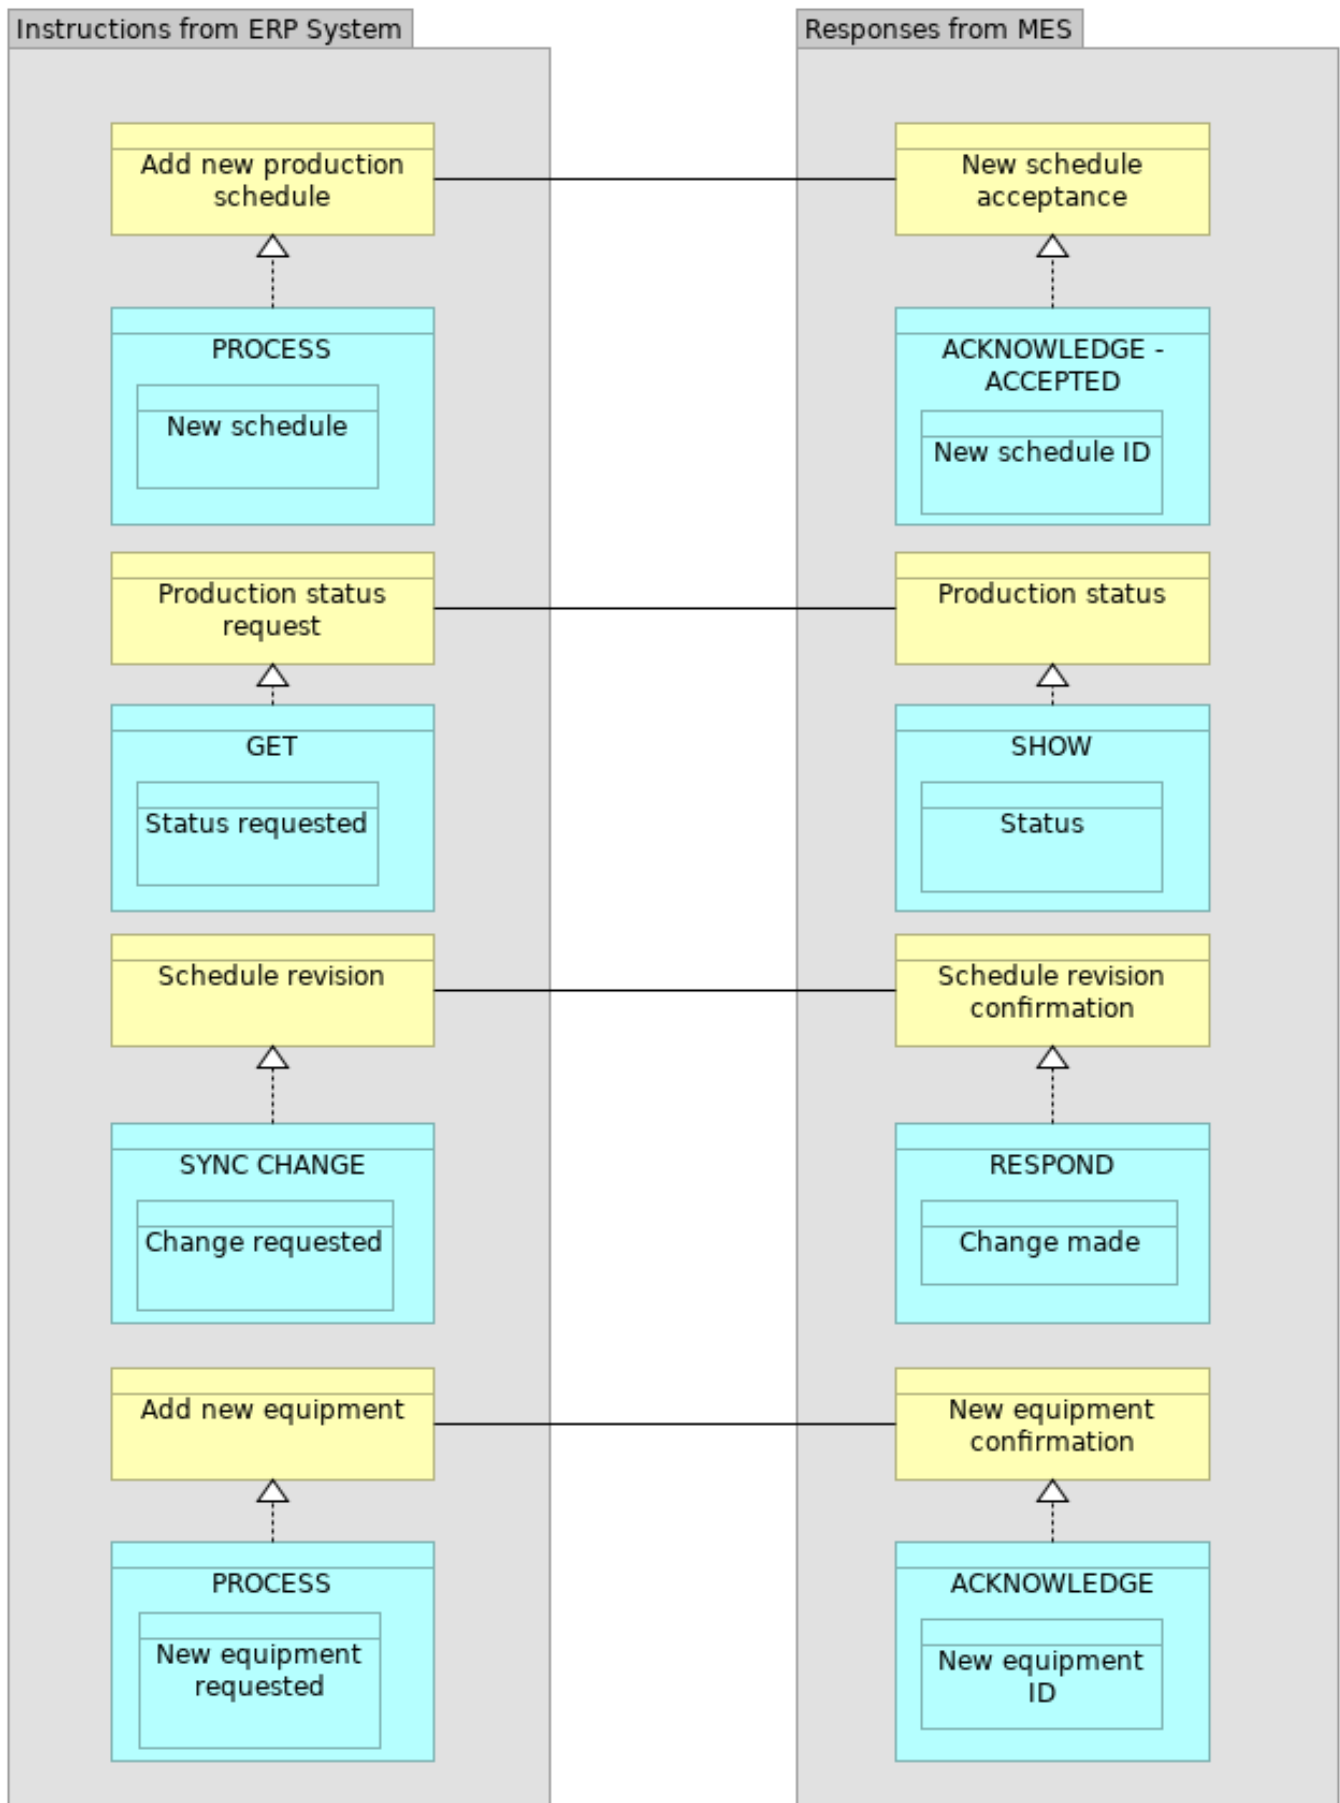

Element	Type
Area	Location
Batch operations	Business Function
Continuous operations	Business Function
Enterprise	Business Actor
Process cell	Location
Process cell controller	Node
Process cell unit controller	Node
Production line	Location
Production line controller	Node
Production unit	Location
Production unit controller	Node
Repetitive or discrete operations	Business Function

<b>Element</b>	<b>Type</b>
Site	Location
Unit	Location
Work cell	Location
Work cell controller	Node

# 05. ISA-95 messages exchanged

No viewpoint

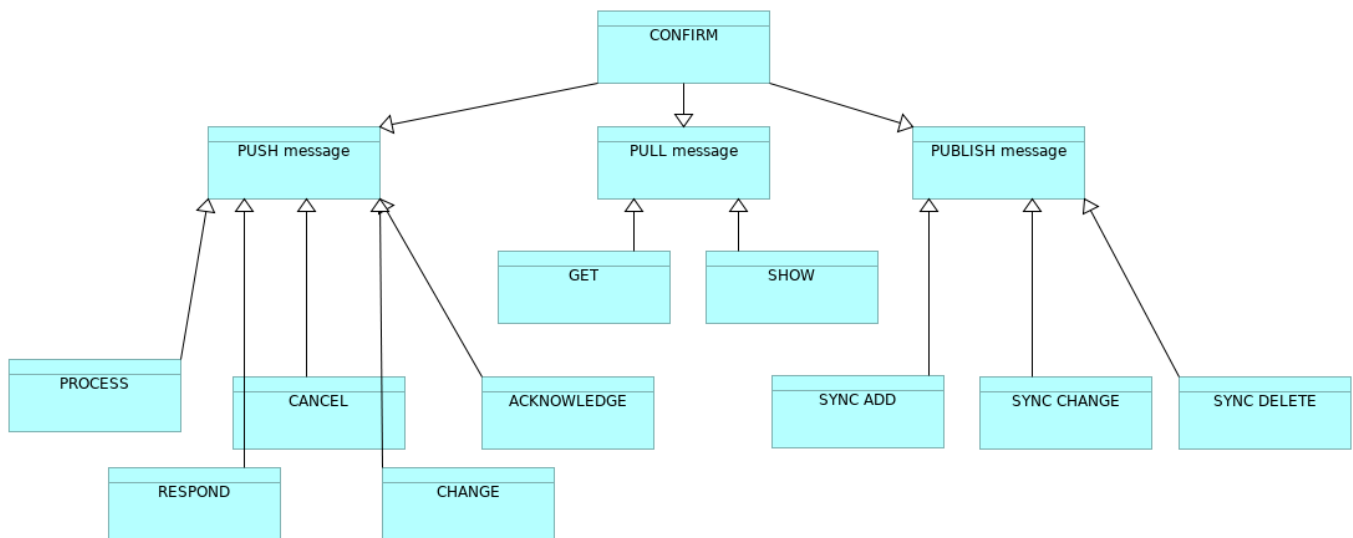

## Elements

<b>Element</b>	<b>Type</b>
ACKNOWLEDGE	Data Object
ACKNOWLEDGE - ACCEPTED	Data Object
Add new equipment	Business Object
Add new production schedule	Business Object
Change made	Data Object
Change requested	Data Object
GET	Data Object
New equipment confirmation	Business Object
New equipment ID	Data Object
New equipment requested	Data Object
New schedule	Data Object
New schedule acceptance	Business Object
New schedule ID	Data Object
PROCESS	Data Object
PROCESS	Data Object
Production status	Business Object
Production status request	Business Object
RESPOND	Data Object
Schedule revision	Business Object
Schedule revision confirmation	Business Object
SHOW	Data Object

SYNC ADD	Data Object
SYNC CHANGE	Data Object
SYNC DELETE	Data Object

## 07. Object model summary

No viewpoint

### Object Model Summary

Based on ISA-95 Part I Figure 24, page 77  
All associations can be interpreted as right-to-left "Corresponds to a..." relation

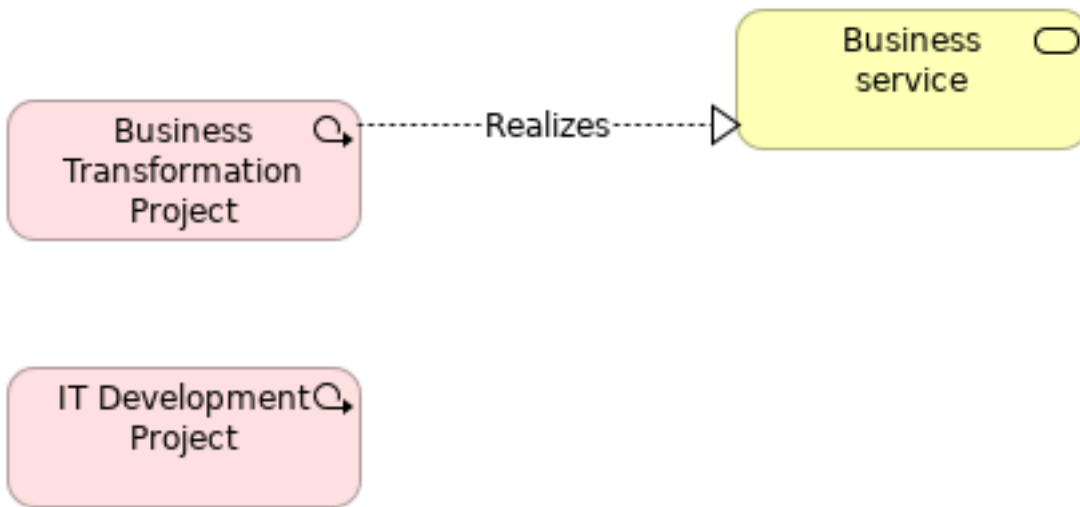

## Elements

Element	Type
Process segment capability	Business Object
Product segment	Business Object
Production capability	Business Object
Production performance	Business Object
Production request	Business Object
Production response	Business Object
Production rule	Business Object
Production schedule	Business Object
Resource actual	Data Object
Resource actual property	Data Object
Resource capability	Data Object
Resource capability property	Data Object
Resource requirement	Data Object
Resource requirement property	Data Object
Resource segment capability	Data Object
Resource segment capability property	Data Object
Resource specification	Data Object
Resource specification property	Data Object

<b>Element</b>	<b>Type</b>
Segment requirement	Business Object
Segment response	Business Object
